Digital Marketing and Sublimation User Satisfaction, Piura - Perú

Nuñez Morante George David, Román Junior Balvin Azaña, Flores Zafra David

Abstract: The objective of this study was to determine the relationship between digital marketing and the satisfaction of sublimation users in the department of Piura - Peru. For this purpose, a basic type of research was improved, with a non-experimental design, with a correlational scope, and cross-sectional. Users of the Piura sublimation service who will be between 18 and 65 years of age will be left as a population. Likewise, the sample was considered based on the statistical calculation, resulting in 384 respondents. The technique applied was the survey, and the research instrument was complemented with two questionnaires based on the Likert scale, whose collected data was processed using the SPSS software. The results that were achieved proved that there is a relationship between the variables studied. Finally, to reach this conclusion, the non-parametric test of Spearman’s Rho was obtained with a p-value equal to 0.000 and a level of connections of 0.839. Finally, the conclusions obtained in the investigation indicate that there is a high positive confirmation between the variables digital marketing and satisfaction of sublimation users in the department of Piura, this indicates that digital marketing offers tools and strategies that are useful to increase user satisfaction, and, therefore, have loyal customers, thus showing better results for the organization.

Keywords: Digital Communication, Digital Advertising, Digital Promotion, User Satisfaction.

I. INTRODUCTION

Digital marketing is relevant because it helps organizations generate higher sales and have greater visibility in the market. Likewise, it will strengthen the link that the company has with its customers, thus achieving loyalty [17]. It can be indicated that it generates the advantage of reaching many more people and segmenting them, at an affordable cost [18]. Finally, we can infer that it is versatile since it has many tools to meet its objective: web page, social networks and search engines [19]. In the same sense, it has a main characteristic, as well as recognizable in all media. Therefore, it is the constant change that we notice in the way companies are managed. Likewise, as the tools and methodologies for decision-making have become more flexible, therefore, taking advantage of opportunities requires a correct analysis. Among the interesting figures regarding digital marketing in the world, we have regarding electronic commerce, 51% of people use the Google engine to search for information about what they need to buy online, in the same way, 59% of buyers consider mobile devices as a factor of great importance when deciding a provider of required products [15]. On the other hand, in the Peruvian sphere, the portal [16] mentions that 83.8% of Peruvians use social networks, that is, more than 28 million people, of which 48.2% are women and 51.8% are men.

Among the most prominent opportunities that exist for a greater reach to the public to which the different organizations are directed is digital marketing which has been baptized with various names, online marketing, virtual marketing, electronic marketing, among others. Therefore, this promising alternative of giving a virtualized approach to the work that companies do to reach the target audience is one of the most revolutionary trends that human knowledge has been able to conceive for an accessible use by almost all types of businesses in all parts of the world. world, finds it useful in small neighborhood businesses to large corporations worldwide.

It is important to highlight that companies currently encourage customers to stay in constant virtual and face-to-face interaction and this encouragement implicitly wants to generate satisfaction through a good experience that goes from customer acquisition to the post-sale moment. In this sense, a whole pleasant process directed towards the client is sought and that brings benefits related to loyalty, purchase frequency and recommendation, all of this must be achieved through an adequate use of the tools offered in this case. digital marketing. In consideration of the aforementioned, we can take into account several authors, articles, bibliography in general that will give us a broader panorama with their different points of view regarding what could be conceptualized as satisfaction.

II. LITERARY REVIEW

The study presented a positivist paradigm that was framed in the following theories. In the first place, in the theory of quality, which indicates that quality means fully satisfying the expectations of the customer. For this, the organization must develop and implement activities aimed at improving its effectiveness and efficiency [20]. And secondly, in the theory of modern marketing (Marketing 4.0),

Digital Marketing and Sublimation User Satisfaction, Piura - Perú

Which establishes that organizations must make parallel use of traditional marketing strategies and digital marketing, in order to increase the productivity of the organization and satisfy optimal customer needs [21]. According to [5] satisfaction is a key factor frequently used by organizations in the modern world that allows them to have a reference level of how happy the customer is with the way in which the product has been provided, or how they are evaluating the performance of the company at some point is specific, which the results obtained from this measurement will have an impact on the culture of the company; Considering these scopes, among the ways to measure satisfaction, the present alternative can be considered: Employee report regarding customer contact, market research, focus groups, hidden customer, surveys, dissatisfaction tracking, among others. Meanwhile [6], emphasizes that satisfaction has to do with the mood of the users who provide their evaluation after having compared the fulfillment of the expectation that they have of a product with respect to what the company has offered. [8] considers satisfaction as a difficult process that must take into account aspects such as psychological, physiological, cognitive, among others not manifested, discovered, or considered yet by the information that we currently have. On the other hand, [7] indicates that satisfaction as the response of users or clients with a temporary opinion about the good or service that they value based on the level of pleasure generated by the consumption or use of what is obtained, which, without However, it could change if the good or service undergoes some type of modification that affects or is detectable by its perception. Finally [9], and [25] state that satisfaction is a consumer reaction in which an individual subjective evaluation has been taken into account. In it, he measures his expectations about the good or service used taking his previous perspectives as a reference, resulting in a final assessment that can be satisfactory or unsatisfactory [15].

The current information and communication technologies offer a wide range of possibilities of accessibility to markets, connections, interactions, advertising formats among other aspects that allow a constant generation of innovation and useful trends at the level of effectiveness. [1] considers digital Marketing as the strategic operation to be able to generate marketing actions for goods and services that are offered in digitized media, with the advantage that information can be disclosed in real time, which would allow with greater certainty. For its part, [2] asserts that this type of marketing helps to generate a union of methods and means that were traditionally considered in an earlier stage as the most useful, integrating them now in better possibilities of connecting with users. Digital marketing, according to the contribution of [3], considers that electronic commerce trends are inclusive in terms of all types of applications that are used to market virtually, which means that this contributes to a better connection and interaction of the organization with the client by reducing the barriers that previously existed to be able to interact with them, being an appetizing opportunity to be able to retain clients through the use of the range of possibilities offered by this virtual world. In contrast, we find [4], who asserts that virtual marketing is identified by using devices such as smart TVs, cell phones, tablets, video game consoles. This type of marketing goes hand in hand with digital technology, mainly accompanied by interaction networks which serve to link information with users to whom useful information can be provided in real time. In the same sense, various previous investigations were considered where the following subject was covered in the case of:

In a qualitative investigation of [10] on the influence of digital Marketing on the satisfaction of the clients of Caja Arequipa in Tacna 2021, it was concluded that if there is an influence of the first variable on the client, therefore, it is recommended to give it the due value. so that the client has a more favorable opinion. Meanwhile, [11] In his inquiry into the relationship between digital marketing and customer satisfaction of Lemonnier mascotas EIRL, Cieneguilla 2020, in this deepening regarding these two variables it was applied methodology, qualitative cross-sectional, in it it was concluded that there are a positive correlation between these two variables, with respect to the company in question. For his part [12] in his research to determine the relationship between digital marketing and customer satisfaction in the commercial company Ate 2022, the same one that was quantitative, transversal, non-experimental, in which the relationship between digital marketing and satisfaction was concluded. the client's...

III. METODOLOGY

The present study was of a basic type; with a non-experimental design, due to the non-manipulation of the dependent variable called user satisfaction. According to the contribution of [14], it can be affirmed that correlational studies present a level of association between their variables, with the aim of demonstrating a simple regression [21]. As indicated above, a cross-sectional and correlational study was carried out [22]. That is to say, the information will be collected in a certain period of time, in turn an attempt will be made to prove the incidence of one variable over another.

Taking into account the scientific knowledge National Council of Science, Technology and Technological Innovation [13], and what was indicated by Hernández and others, the present investigation is quantitative, since numerical data were collected and statistics were used to test the hypotheses. of study proposals, which are intended to see the interference of one variable on another [23].

Notas: Imagen de variables correlacionadas.
Donde: M: They are the users who opt for sublimation in Piura. O1: Analysis of variable 1: Digital Marketing. O2: Analysis of variable 2: User satisfaction, r: Correspondence of variables to be studied.

Population: made up of users of the service from 18 to 65 years of age from the Piura district, the same ones who used the service, with an infinite population sample and a representative sample, being random, inferring that the study subjects have had the same possibility of being part of the service, of the sample. Finally, the technique is the survey and as an instrument the questionnaire.

IV. RESULT AND DISCUSSION

Descriptive and inferential statistics were used to measure the perception of the study based on the link between the variables digital marketing and complacency. According to [24] descriptive statistics is related to ordering and classifying the results considering parameters, meanwhile, the inferential provides us with results worked on a sample. Among the research-based evidence that we can consider for the following article, are those that we present below: For the fulfillment of the first objective, which consists of determining the relationship between digital communication and sublimation user satisfaction in Piura, the following result was obtained, as evidenced in table 1.

**Table 1.**

<table>
<thead>
<tr>
<th>Rho de Spearman</th>
<th>Satisfacción</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comunicación digital</td>
<td>Coeficiente de correlación 0.389</td>
</tr>
<tr>
<td></td>
<td>P-value 0.01</td>
</tr>
<tr>
<td></td>
<td>N 385</td>
</tr>
</tbody>
</table>

*p<0.01(altamente significativo)

A deep, revealing correlation was determined between digital communication and satisfaction of the interested parties due to the fact that the p-value is less than 1%; likewise, a high degree of correlation is certified (r=0.839); In this sense, the one whose premise is that digital communication and user satisfaction are considerably linked is accepted.

Regarding objective two, which seeks to verify the link of digital promotion and the satisfaction of customers of the sublimation service in Piura, the following result was reached:

**Table 2.**

<table>
<thead>
<tr>
<th>Rho de Spearman</th>
<th>Satisfacción</th>
</tr>
</thead>
<tbody>
<tr>
<td>Promoción digital</td>
<td>Coeficiente de correlación 0.755</td>
</tr>
<tr>
<td></td>
<td>P-value 0.01</td>
</tr>
<tr>
<td></td>
<td>N 385</td>
</tr>
</tbody>
</table>

*p<0.05(significativo)

A great correlation was determined between digital promotion and user satisfaction because p-value is less than 5%; Similarly, there is a high correlation (r=0.775), therefore the hypothesis that digital promotion and customer satisfaction are related is accepted.

Regarding objective three, which investigates whether there is a relationship between digital advertising and the satisfaction of users of the sublimation service in the district of Piura, this result was reached:

**Table 3.**

<table>
<thead>
<tr>
<th>Rho de Spearman</th>
<th>Satisfacción</th>
</tr>
</thead>
<tbody>
<tr>
<td>Publicidad digital</td>
<td>Coeficiente de correlación 0.801</td>
</tr>
<tr>
<td></td>
<td>P-value 0.01</td>
</tr>
<tr>
<td></td>
<td>N 385</td>
</tr>
</tbody>
</table>

**p<0.01(altamente significativo)

A considerable correlation of digital advertising and customer satisfaction was determined considering that the p-value is less than 1%; In addition, a high positive correlation is evidenced (r=0.801), therefore the conjecture that digital advertising and user satisfaction are linked is accepted

V. CONCLUSION

The general conclusion regarding the relationship between digital marketing and user satisfaction in the sublimation service in Piura has been able to determine that there is a high correlation according to the results obtained, which, comparing it with those of other investigations with the same variables, accentuate the importance of periodically evaluating and reinforcing them. It is important to mention that you have to know how to correctly use the range of possibilities offered by digital marketing in order to positively influence customer satisfaction, which is ultimately what each company requires in order to retain them. It is notorious that the high correlation of digital communication with customer satisfaction (r=0.839) gives us a very accurate reference to the importance of interacting virtually with strategies that allow generating benefits of this dimension for the organization.

RECOMENDATIONS

It is recommended to current organizations of all levels, from small enterprises, highly recognized companies, in the field that best suits them, to give due importance to the fundamental role that digital marketing plays in our times in relation to customer satisfaction. This is based on the understanding of the premise that if companies correctly select the electronic tools that are most compatible with their market segment, then they will be able to generate the most satisfactory scenario for their claims.

AUTHORS PROFILE

Núñez Morante George David. Graduated in Business Administration, he has a Master's Degree in Business Administration from the César Vallejo University, he is currently pursuing a PhD in Business Administration at the same university, he has carried out research related to Digital Marketing and user satisfaction, he has with specializations in Public Management, State Contracting, management of the SIAF Integrated Financial Administration System, in terms of his professional experience, the aforementioned author has approximately 15 years in both the public field and the private sector, which has allowed him to expand his knowledge practical theoretical in administrative sciences, he has also been in charge of the central warehouse of office supplies and technology (basic printers, multifunctional printers, CPU, monitors, keyboards among others) of the Public Ministry - Sullana Headquarters, as well as administrator in the Security Management Citizen of the Municipality Provincial Authority of Piura in which he achieved, together with his team, the fulfillment of the proposed goals, which benefited the institution with a million-dollar financial outlay from the central government for compliance with the activities entrusted in a six-month period, he is currently the general manager of the personalized products and textile company named SUBLIDET, as well as teaching at a higher level at the IJAT Institute, Marketing, Accounting and Advertising Sciences, teaching courses such as Strategic Planning, Business Plan, Operational Plan, Processes Interns, Introduction to Marketing, Fundamentals of Administration among other courses of high interest in training. He has been selected to teach at the César Vallejo University - Piura in the Faculty of Marketing and Business Management...

Román Junior Balvin Azaña, Peruvian national, candidate for a PhD in Administration from the César Vallejo University. Master in Strategic Management, Finance and International Printing, from the Universidad Deegh S. Antonio de Genoa, Italy. Master in Business Administration and International Finance – International MBA, Bachelor and Bachelor of Administration, from the Universidad Católica Sedes Sapientiae. With specializations in Public Management, Human Resources Management, and Marketing Management and Commercial Management. Professional with more than 8 years of work experience in the field of business management. Currently, he holds the position of Administrative Director at the Graduate School of the Sedes Sapientiae Catholic University. Previously, he has worked in trading and telecommunications companies. Extensive knowledge in issues related to administration, human resources, marketing and strategic planning. Undergraduate and postgraduate university professor at the Business School of the Universidad Privada del Norte, Universidad Tecnológica del Perú and Universidad Católica Sedes Sapientiae. Likewise, thesis advisor at the undergraduate and postgraduate level in the lines of research related to business management, marketing, human resources and strategic management. He is also part of the advisory committee of the Master's Degree in International Business Administration and Finance - International MBA, of the Graduate School of the Sedes Sapientiae Catholic University. Finally, he has participated as organizer of the International Round Table “Strengthening and Supervision of the Cooperative Credit System”, developed by the Graduate School of the Sedes Sapientiae Catholic University. In addition, he has been a speaker in the Entrepreneurship course, a market research module, developed by the Metropolitan Municipality of Lima.

Flores Zafra David Professional in Systems Engineering with a PhD in Administration and a Master's in Information Technology Management. He also has a tuition from the College of Engineers with code 245772 and orcid code 0000 – 0001 – 5846-325X. Currently, I work as a Project Manager at IBM / Kyndryl del Perú S.A for infrastructure projects both on VMware, AIX, Windows, Linux, Mainframe, storage, SAN, networks, Backup and monitoring platforms applying good practices of IT processes and management; on the other hand,
I manage the technological renovation program both in Peru and Brazil for the banking sector. In the same sense, I work as a part-time teacher in the systems engineering graduate program at the César Vallejo University. In addition, to play the role as a part-time teacher in the methodological advisory of undergraduate thesis at the School Professional Business and Competitiveness Academic at the private Norbert Wiener University. To date, I have publications in international journals regarding engineering and administration studies as part of the scientific collaboration with society; the topics published are: "Expert system to improve nutritional health through the evaluation and recommendation of nutritional diets"; "Expert system for the SGTI in the company Sion Global Solutions"; "Social conflicts and economic development in the context of the Huánuco region"; "Expert system for the management of information technology services in the company Sion Global Solutions, Lima 2019"; "Analysis Of Research Culture And Scientific Production In A National University" and “Engagement In Teachers Of An Educational”, in addition to the publications of 2 books as author and co-author. Lastly, I have the role of blind peer reviewer in the international journal "Innova Research Journal" from Ecuador.
